TejashCAM Free For PC

TejashCAM is a lightweight application built specifically for helping users capture images from their webcam. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you to need to grab images from your webcam on the breeze. TejashCAM sports a clean and straightforward layout that offers only a few configuration settings to tinker with. The program gives you the possibility to start or stop the webcam directly from the primary panel, enable the image preview mode, as well as select the saving directory and open it from the main window. When it comes to configuration settings, you are allowed to choose the video device, and adjust the levels of brightness, contrast, saturation, hue, sharpness, white balance, and gamma. Other important features worth mentioning are represented by the possibility to select the zooming level, alter the exposure value, or make the program automatically adjust the aforementioned parameters. Since there aren't many configuration settings, even rookies can set up the process with minimum effort. During our testing we have noticed that the tool accomplishes a task very quickly, and no errors showed up throughout the entire process. It doesn't put a lot of stress on system resources, so the overall performance of the computer is not affected. To sum things up, TejashCAM offers an intuitive layout and a handy set of parameters for helping you grab images from your webcam, and is suitable for beginners and professionals alike.
