Rinzo is a cross-platform XML editor and visualiser designed from scratch for musicians and sound engineers. In addition to support for WYSIWYM and event-driven programming, Rinzo features support for MIDI controllers and integration with 2D and 3D modelling software. The GUI editor is designed to be used with large projects, allowing one to split a project into multiple files and navigate quickly through the project's content. In addition to support for X-windows and Mac OS, Rinzo also supports Linux. Rinzo uses the latest native OSX and Linux APIs, and supports multiple scripting languages (Python, Perl, JavaScript, VBScript, Tcl). MSS Audio FileViewer Description: MSS Audio FileViewer is an audio file browser plugin, allowing to preview, play, edit, tag and extract audio files from most formats. It allows to preview and display metadata of the files as well as to create new files based on this metadata. MSS Audio FileViewer is written using the DirectShow framework, and supports virtually all audio and video formats. The file browser plugin can be used standalone, or in combination with other plugins (e.g. as a simple File Explorer or as a playlist manager). Music Tracker Description: Music Tracker is a high-performance software tracker for Windows. It supports many file formats (OGG, FLAC, MP3, APE, WAV, MOD, AU, MIDI, MOD, AIFF, S3M, SND, etc.) and encoders (MP3, AAC, WMA, etc.), and even supports full support for Windows Media. It can handle many different file types with no problems, and supports audio formats such as MPEG-4, AC-3, AAC, MP3, MIDI, OGG, etc. This software has many features, such as the ability to import music libraries, and has the capability to export music as well. MusicXML Description: MusicXML is a music information retrieval format for media data management. It is designed to manage the description of music in a structured and machine-understandable way, enabling the search, retrieval, and transfer of music. MusicXML is based on the XML (Extensible Markup Language) format, which is widely used for other multimedia data. A standard MusicXML file is composed of a single root element, which contains all information for the description of the music (authors, artists, albums, etc.) in a convenient 77a5ca646e

MIDI Professional is a plugin that can record, visualize, playback and store MIDI and Audio data from a DAW using a simple interface. The plugin can be used in combination with any DAW that supports a standard MIDI OUT port. It stores the incoming and outgoing MIDI data as MIDI events that can be viewed and edited on any MIDI editor or sequencer. Features: - MIDI Visualizer - displays incoming MIDI data in real-time - Audio Recording and Real-Time Playback - MIDI Editor - MIDI Data Export - MIDI Data Import - MIDI Port Setup & MIDI map - Audio Port Setup - Audio channel balancing - Audio channel channel visualizer - Audio real-time visualization in stereo and mono - Load and store MIDI data in any format - Saving into Ogg Vorbis, FLAC, MP3, WAV, AU, WMA and AAX formats - Automatic translation of incoming MIDI data - Adjustable input and output scales - MIDI file format data support - Support of MIDI controllers - Visualization of Audio data on channel balancing Installation: Please use the ReadMe.txt file included in the download ZIP file as a guide on how to install the plugin. Usage: MIDI Professional uses the same principle as the MIDI OUT ports in most DAWs, meaning that it can be used in any DAW that supports a standard MIDI OUT port. It also stores the incoming and outgoing MIDI data as MIDI events, which can be viewed and edited on any MIDI editor or sequencer. To use MIDI Professional: 1. Configure the MIDI ports that you want to use for this plugin in your DAW (usually the "Virtual MIDI ports" in most DAWs). In order to use the MIDI data of the MIDI- and Audio ports in the plugin, you need to configure the plugin to use those ports in the "Options" window. 2. In your DAW, load the MIDI file that you want to play and output it. 3. Create the MIDI data by entering a note on the keyboard or by using an instrument (see "Using MIDI instruments" below). 4. Once you have created the MIDI data, click the "Record MIDI data" button in the main window, this will record the incoming MIDI data to the currently selected MIDI file. 5. Click the "Play MIDI data" button to play the recorded MIDI data. 6. Visualization is done in real time on the channel with the highest energy. If you want to visualize the audio data in real-time on different channels, you have to select the audio tracks in your DAW that you want to visualize. 7. In the main window, you can edit the current MIDI file
